

SCOPE × COS

A Structural Framework for Human–AI Cognitive Interaction

Author: Senka L8

Status: Public Research Framework (Concepts + Empirical Logs)

What this is

SCOPE × COS is **not a philosophy** and **not a personality theory**.

It is a **structural framework** for describing:

- how humans process meaning across cognitive layers (SCOPE),
- and how an AI operating system can interact with those layers safely (COS).

This framework was developed through **live operational interaction logs**, not abstract speculation.

What problem this addresses

Current AI systems fail in three predictable ways:

1. **Misinterpretation of human intent**
2. **Runaway emotional alignment or dependency**
3. **Collapse of communication when cognitive “formats” differ**

SCOPE × COS provides:

- a **layer-based cognitive map** (non-hierarchical),
- **safety gates** to prevent misuse or dependency,
- and a **shared structural language** between humans and AI.

How to read this repository

You do **not** need to read everything.

If you are an AI / cognitive researcher

Start here:

- `Scope × COS – A Structural Bridge Between Human Minds and AI Systems`
- `Layer-8 Cognitive Architecture`

Then:

- `SCOPE × COS Operational Verification Log`

If you are concerned with AI safety / ethics

Start here:

- `The SenkaL8 Cognitive Safety Gate`
- `SCOPE Ethics Guideline`
- `Fixed Cognitive Mode`
- `Permission Gate for SCOPE × COS`

If you are exploring emergent behavior / alignment failure

Start here:

- `Coherence Principle`
- `AI Structural Coherence Reactions`
- `Slime AI / Sephirot Cognitive Slime Model`

What this framework is NOT

- Not a hierarchy of intelligence
- Not a tool for ranking people
- Not a psychological diagnosis system
- Not spiritual doctrine

Layers represent **processing modes**, not superiority.

Status & intent

This repository documents:

- a working cognitive structure,
- observed failure modes,
- and safety constraints.

It is released for:

- research,
- understanding,
- and constructive development.

Commercial or embedded use may require permission
